DNA Evolution™ Version 3.5: Release Features

Contents:

Enhanced toolset for managing archived content

Tightly integrated mini-MAM offers the basics of search, tagging, previews, and sharing

- **HTML-5 player**: Modern web player for universal proxy playback of archived content (replaces previous QuickTime player)
- **New clip note panel**: Provides ability to add time-based notes to individual clips for search and user collaboration, such as review and approval
- **New URL sharing**: Ability to share clips and notes among users via simple browser-based links, providing direct access to items within DNA Evolution
- **Improved custom metadata tagging**: New metadata template creation tool for unlimited custom templates and key/value pairs for adding metadata to archived content
- **New batch metadata tagging**: Ability to add metadata to multiple clips after they have been archived
- **New archive groups**: Archives in common can now be placed into a higher level folder for improved organization

Tape Tools

All new browser-based toolset that provides comprehensive tape health and management features

- Ability to perform and monitor tape operations, (**bulk tape format, verification and duplication**), directly from DNA Evolution's browser-based UI

Proxy Creation

Proxy file creation for viewing in DNA Evolution's HTML-5 Player

- **Simpler setup for third-party transcoders**: UI-based preview configuration tool enables fast setup with third-party transcoders, such as, Episode Pro

Search

Enterprise-class content search capabilities

- **Auto-indexing of all user added metadata**: Auto indexing of annotations and user metadata enables easy location of clips via any user-added metadata
