DNASync Version 3.0 Quick Start Guide

- You will find the following enclosed in the box:
 - (1) DNASync Manager HP server
 - (1) Power Cord
 - (1) USB Keyboard
 - (1) USB Mouse
 - StorageDNA User Guide, HP Documentation
- Unpack the DNASync Manager hardware.
- Plug the following into the DNASync Manager BEFORE powering it on:
 - Power cord
 - Networking connected to a router with DHCP enabled
 - Keyboard
 - Monitor (not included)
- You are ready to power on the DNASync Manager.
- After booting the DNASync Manager will prompt for login.
- Put in the following default username and password.
USERNAME: **sysadmin**
PASSWORD: **password**
- You will see the DNASync Manager System Setup screen. We will now setup a static IP and a new password. Please make a note of the new password for future reference.
- Setup the IP address (option 0) and following the steps.
- Note:** The default SSL certificates installed on the system requires the hostname to be "dnaserver". If you provide your own SSL certificate, the hostname must match the name on the certificate.
- Setup a new password by selecting option (2) and following the steps.
- Now test that you can access the DNASync Web Management Console from another client connected to the LAN by logging in via a browser ([https:// <IPaddress> OR <Hostname>](https://<IPaddress> OR <Hostname>)).
- Note:** The administrator's user account for the system setup console is **sysadmin**. The administrator's user account for the web is **admin**. To login as the administrator on the web management console in the browser use the following default credentials.
USERNAME: **admin**
PASSWORD: **password**
- If you are able to connect to login to the DNASync Web Management Console, you are ready to start installing DNASync client seats. If you are unable to login, check to ensure network connectivity.
- To download the DNASync Client software (DNAClient): click on MySyncs, select Client Installers on the left pane, then use file browser on the right to select the correct version and platform for your client. (Note: Client installers require Java. If your Windows client does not have Java, use the Installer under the VM directory which includes an embedded Java VM)

```
-----  
SDNA Setup Options  
-----
```

```
(0) Networking Menu  
(1) Change Hostname  
(2) Change Setup User Password  
(3) System Services Menu  
(4) Reboot Server  
(5) Shutdown Server  
  
(6) Empty Trash Folder  
(7) Recover LDAP  
(8) Recover Database  
  
(9) Exit
```

```
Please enter your selection->
```

Once the ip address is configured, you can access the DNASync Manager System Console remotely.

Mac and Linux: type the following in terminal
`ssh sysadmin@<IP address/Hostname>`

Windows: Download and use Putty (freely downloadable) or another SSH terminal client.

NOTE: IT IS HIGHLY RECOMMENDED YOU READ THE DNASync ADMIN/USER GUIDE BEFORE YOU START SETTING UP AND CREATING SYNC JOBS.
